

# Alarm System Certificate Services

As a jurisdictional authority, you require that installed alarm systems use UL Listed equipment. Also, you require that the systems be monitored by UL Listed monitoring stations.

But, how can you be certain that the systems you oversee are properly installed, serviced and maintained as required by Nationally Recognized Codes and Standards? Will the signals from an alarm system in your jurisdiction actually be handled and processed as required by these Codes?

UL's Alarm System Certificate Service provides you with a convenient and reliable way to identify installed alarm systems that are currently tested, monitored and maintained to meet all applicable codes and standards. These Certification Programs place the widely recognized UL mark on the entire system in the form of a UL Certificate.

## What we offer

UL offers jurisdictional authorities a variety of services to help integrate the use of Certificates into code compliance management, loss control and underwriting processes. This includes various printed reports as well as free online access to UL's Certificate Verification Service (ULCVS). ULCVS gives authorities real time access to the latest information in our Certificate database. In addition UL offers support to jurisdictional authorities in the form of educational seminars and meetings.

Certificate service is available for commercial burglar and fire alarm systems.

## Certification Advantages

- False alarm reduction
- Effective use of fire prevention staff
- Standardization between jurisdictions
- Alarm contractor accountability
- Level of quality for end user
- No cost to the jurisdiction to use the program
